

AMENDMENTS TO THE CLAIMS

No amendments to the claims are being submitted in this paper. This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Previously presented) A method for biologically controlling a cryptogamic vine disease, comprising applying to a vine having said cryptogamic disease a mixture consisting essentially of at least one isolated bacterium and at least one isolated yeast and an inert vehicle, the bacterium or bacteria and the yeast or yeasts being non-toxic to the vine, and said bacterium or bacteria is/are selected from the group consisting of the *Bacillus*, *Pseudomonas*, *Serratia* and *Streptomyces* genera, to treat said disease.
2. (Cancelled)
3. (Previously presented) The method according to claim 1, wherein the bacterium or bacteria are selected from the group comprising a *Bacillus megaterium* species and/or a *Bacillus subtilis* species.
4. (Previously presented) The method according to claim 1, wherein the yeast or yeasts are selected from the group consisting of the *Debaryomyces* genus and *Pichia* genus.
- 5-15. (Cancelled)
16. (Previously presented) The method of claim 1, wherein said at least one isolated bacterium comprises *Bacillus megaterium* (BP B-01) strain (CNCM Deposit No. I-2897).
17. (Previously presented) The method of claim 1, wherein said at least one isolated bacterium comprises *Bacillus subtilis* (BP B-10) (CNCM Deposit No. I-2940).

18. (Previously presented) The method of claim 1, wherein said at least one isolated yeast comprises *Debaryomyces* (BP Y-01) (CNCM Deposit No. I-2896).

19. (Previously presented) The method of claim 1, wherein the yeast concentration of said mixture is about 0.5 to 0.75×10^{10} and bacterial concentration of said mixture is about 0.30 to 0.50×10^{10} .

20. (Previously presented) The method of claim 1, wherein said cryptogamic vine disease is selected from the group consisting of powdery mildew, blue mould and Botrytis.

21. (Previously presented) The method of claim 1, wherein said applying includes spraying said vine with said mixture having an approximately 50/50 ratio of bacteria to yeast.

22. (Previously presented) A method for biologically controlling a cryptogamic vine disease, comprising applying to a vine having said cryptogamic disease a mixture consisting essentially of at least one isolated bacterium, at least one isolated yeast, a composition of filamentous fungi selected in the group consisting of the *Pichia*, *Pythium*, *Trichoderma*, *Gliocladium*, *Ampelomyces*, *Talaromyces*, *Epicoccum* genera, and an inert vehicle, the bacterium or bacteria and the yeast or yeasts being non-toxic to the vine, and said bacterium or bacteria is/are selected from the group consisting of the *Bacillus*, *Pseudomonas*, *Serratia* and *Streptomyces* genera, to treat said disease.
